

Elacin Relax

The Elacin Relax is manufactured from the very soft FlexFit material (hardness 40 Shore) and has no filter. The ear moulds are hollow on the inside and therefore very comfortable even when lying on a cushion.

Elacin Relax reduces among other things the noise of a partner's snoring or the noise of road or air traffic. These ear moulds muffle optimally, without losing touch with the environment. Alarm and warning signals remain perceptible.

When wearing Elacin Relax after a while, you won't even notice you are wearing them.

Material

The Elacin Relax is manufactured from the very soft FlexFit material (hardness 40 Shore), a proprietary medical grade silicone.

Filters

The Elacin Relax has no filter inside.

Colour

The Elacin Relax is delivered in yellow. However, if desired it can also be ordered in transparent. Due to the extreme softness of the material another colour is not possible.

Application of use

- People on 'shift work'
- Travelling by plane, car, train, bus etc.
- Concentration during studying or working

Suitable for use in

- Open plan offices

Benefits

- **Improved fit:** improved grip for easy insertion and removal. Moreover, the hollow design allows for more comfort, particularly when sleeping.
- Very soft and light, comfortable to use
- No protruding parts
- No pressure in or on the hearing canal
- Easy to clean
- Ensures an uninterrupted sleep
- Better to concentrate by attenuating surrounding noises
- Alarm and warning signals remain perceptible
