

Elacin Swim

Especially for:

- Water sports enthusiasts (swimmers, rowers and surfers)
- Water sports enthusiasts with sensitive ears or who are susceptible to ear infections
- Children with grommets in their ears

People who enjoy water sports such as surfing, sailing, rowing and swimming regularly experience ear inflammation or infection. Elacin has developed an ear mould to wear when swimming, to prevent the chance of inflammation or infection. It is a custom-made ear mould that fully closes off the auditory canal to water. People with grommets or an eardrum perforation can use the ear mould to enjoy water freely again, whether in the shower or in the swimming pool.

Material and colour

There is a choice of floating and non-floating ear moulds. The material of the floating ear moulds has a lower specific gravity than water, which keeps the pieces afloat.

These ear moulds are available in red, blue, yellow, green, orange and swirl – a combination of 2 colours. The non-floating ear moulds come in transparent as standard.

Benefits

- Custom-made for a perfect fit
- Closes the auditory canal to water
- Made from soft, light material
- Easy to insert and remove
- Comfortable to wear
- Also suitable for children
